

To install endnote 7 on a mac with OSX.

Go to connect to server under the GO menu in the finder Go to connect to server under the GO menu in the finder

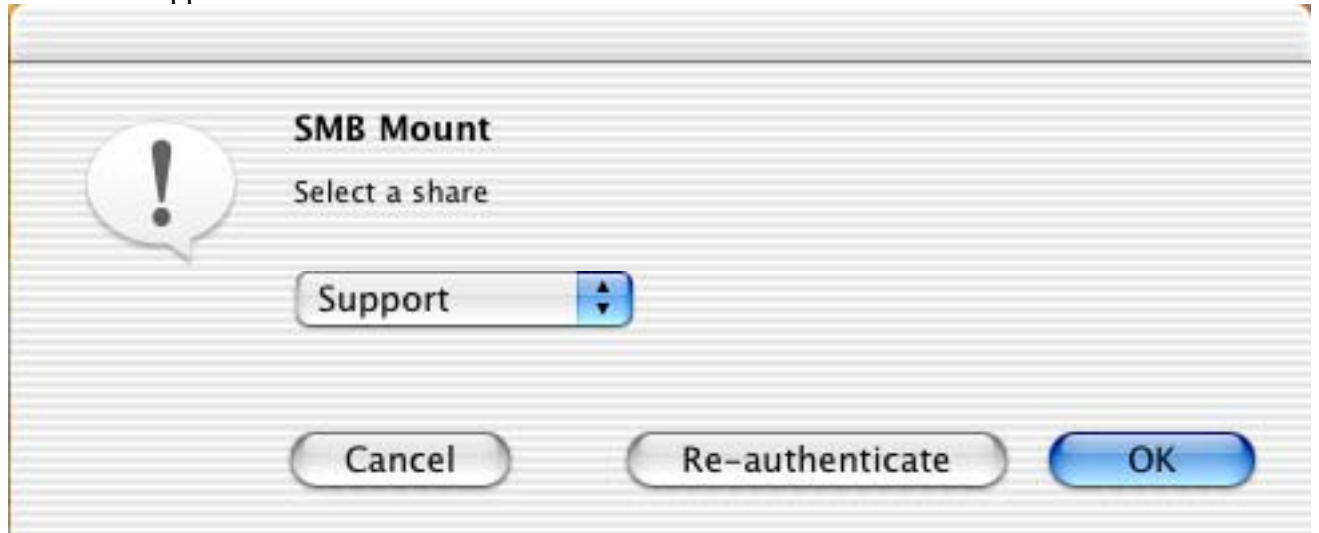

To connect to softserv using smb
Type in smb://softserv.murdoch.edu.au

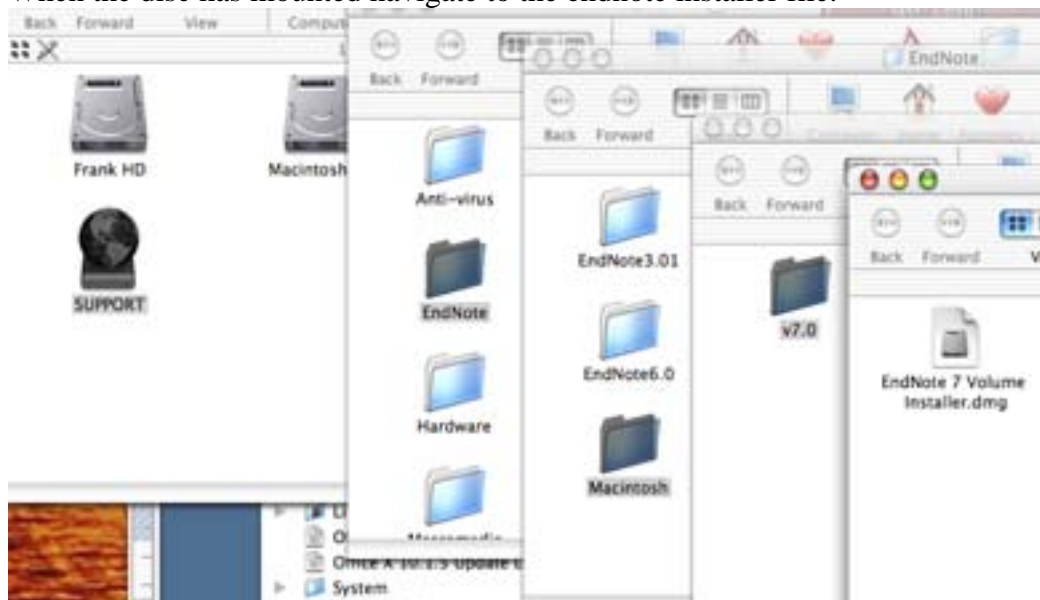

Put in your AD domain details and connect

Select the support area

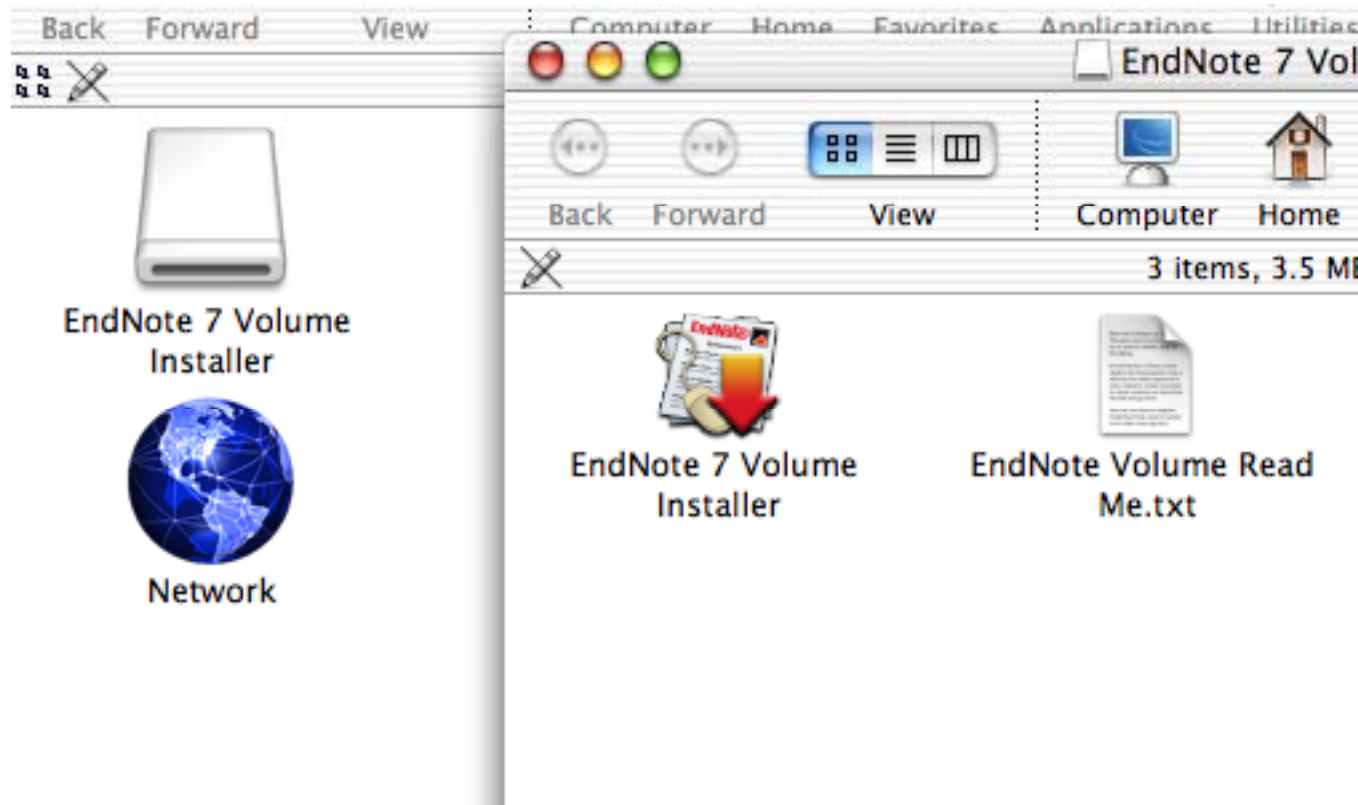

When the disc has mounted navigate to the endnote installer file.

You need to copy the file 'Endnote 7 Volume Installer.dmg' to your local hard disc as it won't uncompress and mount from the support area.

Once copied double click on the file and a virtual disc will mount with the installer and read me files.

Run the installer.

Unmount the support area and the virtual disc. (drag the images to the trash)

Delete the copied file 'Endnote 7 Volume Installer.dmg'

You may need to restart word before endnote will work properly.
